PROFESSIONAL SUMMARY

Java Backend Engineer with 2 years at Deloitte USI building Spring Boot microservices and GraphQL/REST APIs for a global asset-management client in a regulated financial environment. Experienced in production support, SQL performance tuning, and event-driven systems with Apache Kafka. Strong CS fundamentals: 650+ LeetCode problems solved and a 9.11 CGPA.

TECHNICAL SKILLS

Languages: Java, SQL, C++, JavaScript
Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, GraphQL, REST APIs, Spring Cloud Gateway
Messaging & Security: Apache Kafka, OAuth2/OIDC, JWT, Keycloak
Databases: PostgreSQL, Oracle, MySQL, MongoDB, Liquibase
Tools: Docker Compose, Git, Splunk, AI-assisted development (Claude)
Concepts: Microservices, Event-Driven Architecture, Idempotency, Query Optimization

WORK EXPERIENCE

Deloitte USI — Software Engineer I *Oct 2024 – Present*

- Resolved 5–6 high-priority production incidents daily across distributed Spring Boot microservices, using Splunk logs and service health checks to trace root causes such as slow SQL queries and unavailable APIs.
- Optimized slow PostgreSQL/Oracle queries through targeted indexing and query rewrites, cutting response times from ~5s to 300–600ms (~90% faster) on production APIs.
- Contributed to a GraphQL modernization effort, implementing 5–8 GraphQL APIs (schema, resolvers, mappers, data-access layer) to expose holdings data from legacy tables to downstream microservices.
- Developed and maintained backend microservices in Java and Spring Boot with Hibernate/JPA, supporting financial data pipelines and REST APIs.

HighRadius — Product & Engineering Intern *May 2023 – Jul 2023*

- Built a full-stack fintech B2B SaaS application using React.js, Java Servlets, and a machine learning model for predictive analytics.
- Developed an order-amount prediction feature forecasting each customer's next purchase value, enabling proactive inventory and revenue planning.

PROJECTS

Distributed Payment Processing System — GitHub *Personal Project*

Java 17, Spring Boot 4.1, Spring Cloud Gateway, Spring Security, Keycloak, Apache Kafka, PostgreSQL, Liquibase, Docker Compose

- Built an event-driven payment platform of 5 Spring Boot microservices (API gateway, payment, fraud-detection, notification, user-profile/auth) communicating asynchronously over Kafka.
- Secured the gateway and services with OAuth2/OIDC via Keycloak, validating JWT bearer tokens as Spring Security resource servers and deriving sender identity from token claims instead of request payloads.
- Implemented idempotent payment creation with idempotency keys backed by a database uniqueness constraint, plus status-transition rules and Liquibase-managed PostgreSQL schemas.
- Designed a Kafka pipeline where a fraud-detection service evaluates payment events and publishes approve/flag decisions that update payment status and trigger email notifications.

EDUCATION

B.Tech in Information Technology — KIIT, Bhubaneswar *2020 – 2024*
CGPA: 9.11 / 10

Intermediate (Science) — St. Xavier's Intermediate College, Ranchi *2020*
88.6% | 9th State Rank

ACHIEVEMENTS & LEADERSHIP

- Received 3 Applause Awards at Deloitte for rapid project onboarding, resolving critical production incidents with minimal guidance, and delivering API performance optimizations.
- Solved 650+ LeetCode problems, including 125 in Dynamic Programming; earned the 500 Days badge.
- Led the competitive programming team at IoT Lab, KIIT, organizing coding events and hackathons (Jan 2022 – May 2024).
